

Punarnava

Fresh Juice:

When fresh leaves are available, 10 to 20 ml of the extracted juice is consumed daily to help manage water retention

Churna (Powder):

½ to 1 teaspoon of the root powder is mixed into a cup of warm water or blended with a spoonful of honey. It is traditionally taken once or twice a day after meals.

Tablets or Capsules:

Standard commercial supplements—such as those manufactured by Himalaya Wellbeing or Zandu Care—are usually taken as 1 tablet twice daily with water.

Benefits of Punarnava

Metabolic & Blood Sugar Support:

- Research indicates that the plant can improve insulin sensitivity and assist the body in breaking down fat cells, making it a helpful supportive aid for diabetes management and weight control

Kidney Regeneration & Fluid Flushing:

- Punarnava is a potent, natural diuretic. The alkaloid punarnavine stimulates the kidneys to increase urine output, helping to flush out toxins and reduce swelling

WHY ONLY PUNARNAVA ?

Why Punarnava Stands Out:

- 🌱 Important traditional Ayurvedic herb
 - 🌿 Traditionally associated with urinary and digestive wellness
 - 🌿 Used in traditional preparations for general health
 - 🔬 Contains several natural plant compounds
 - ★ Less commonly selected, making it a unique project topic
 - 🌍 Easy to study because of its rich traditional importance
-
